GAME QA TESTING

Functional, Gameplay, UI & Regression Testing Sample

Role: Manual Game QA Tester

Project Type: Personal QA Portfolio Project

Application: Mobile Game (Sample)

Platform: Android

Testing Focus: Gameplay • Functional • UI • Regression • Compatibility • Bug Reporting

This document demonstrates practical manual game QA skills through a simulated mobile game testing scenario. It is a personal portfolio sample and is not client work.

1. Game QA Testing Overview

Objective

Validate core gameplay loops, player progression, UI behavior, save/load functionality, rewards, and session stability while identifying defects that could negatively affect gameplay or player experience.

Scope

In Scope	Out of Scope
Game launch and initial loading	Server-side penetration testing
Main menu and navigation	Backend infrastructure testing
Tutorial / onboarding flow	Load and stress testing
Core gameplay controls	Automated performance profiling
Rewards and progression	Live monetization analytics
Pause / resume / save state	Production monitoring
UI, audio and basic device compatibility	Certification testing

Test Environment

Platform	Android mobile device
OS	Android 14
Game Type	Mobile action / casual game (sample)
Input	Touch controls
Testing Type	Manual / Black-box
Approach	Functional, gameplay, exploratory, regression and UI testing

2. Gameplay & Functional Test Execution

ID	Test Scenario	Expected Result	Status
GTC-001	Launch the game	Game reaches the main menu without crashing.	PASS
GTC-002	Start a new game	Gameplay scene loads and player can control the character.	PASS
GTC-003	Complete tutorial step	Tutorial progresses after the required action is completed.	PASS
GTC-004	Move character using touch controls	Character responds accurately to player input.	PASS
GTC-005	Perform primary attack/action	Correct action animation and gameplay effect occur.	PASS
GTC-006	Receive reward after completing objective	Correct reward is granted and displayed.	PASS
GTC-007	Pause and resume gameplay	Game pauses correctly and resumes without state loss.	PASS
GTC-008	Exit and relaunch after progression	Saved progress is restored correctly.	FAIL
GTC-009	Trigger game-over state	Game-over screen appears with correct options.	PASS
GTC-010	Navigate between menu screens	Navigation works without incorrect transitions.	PASS
GTC-011	Rotate device during gameplay	Game maintains usable layout or handles orientation as designed.	FAIL
GTC-012	Repeatedly restart gameplay session	Game remains stable without crash or corrupted state.	PASS

Result: 10 Passed • 2 Failed • 12 Executed

3.1 GBUG-001 — Player progression is not restored after relaunch

Severity: Critical **Priority:** High

Steps to Reproduce

1. Complete the tutorial and progress to the next gameplay stage.
2. Exit the game normally.
3. Relaunch the game.
4. Open the saved game / continue option.

Actual Result: The game loads an earlier state or starts the player from the beginning instead of restoring the latest completed progression.

Expected Result: The latest valid progression should be restored after relaunch.

Environment: Android 14 / Wi-Fi

3.2 GBUG-002 — Gameplay UI overlaps after device orientation change

Severity: Medium **Priority:** Medium

Steps to Reproduce

1. Launch a gameplay session.
2. Start a level.
3. Rotate the device.
4. Observe HUD elements, controls and action buttons.

Actual Result: One or more gameplay controls or HUD elements overlap or become partially inaccessible.

Expected Result: The game should maintain a usable layout or handle unsupported orientation according to the design specification.

Environment: Android 14 / Mobile device

3.3 GBUG-003 — Reward animation plays but reward value is not immediately updated

Severity: Medium **Priority:** Medium

Steps to Reproduce

1. Complete an objective that grants a reward.
2. Observe the reward animation.
3. Open the reward/progression screen immediately after completion.

Actual Result: The animation displays the reward, but the displayed balance/progression value remains unchanged until the player leaves and re-enters the screen.

Expected Result: Reward value should update immediately after the reward is granted.

Environment: Android 14 / Wi-Fi

4. Regression & Exploratory Testing

Regression Areas

Area	Regression Check	Result
Player progression	Previously completed progress remains available.	FAIL
Rewards	Rewards are granted and reflected in progression.	FAIL
Core controls	Movement and primary actions remain responsive.	PASS
Pause / resume	Gameplay state is preserved after pausing.	PASS
Game-over flow	Restart / continue options work correctly.	PASS
Menu navigation	Main menu and gameplay transitions remain stable.	PASS
UI / HUD	Controls and information remain visible and usable.	FAIL

Exploratory Testing Examples

• Rapidly tap controls during transitions to check for duplicate actions or unexpected states.
• Pause and resume at different points in gameplay to look for state inconsistencies.
• Complete objectives in an unusual order to identify progression issues.
• Exit during loading, reward collection, or level transition to check recovery behavior.
• Repeatedly restart a level to identify crashes, state corruption, or UI inconsistencies.

Game QA Focus

Game QA requires more than checking whether a feature works. Testers also evaluate whether gameplay remains consistent, responsive, recoverable, and enjoyable across different player actions and edge cases.

5. QA Test Summary

Metric	Result
Total test cases executed	12
Passed	10
Failed	2
Pass rate	83.3%
Critical-severity defects	1
High-priority defects	1
Medium-severity defects	2

Release Assessment

The core gameplay loop is functional, but progression persistence should be treated as a high-risk release issue because players may lose progress. Orientation-related UI behavior and reward synchronization should also be fixed and regression-tested before release.

QA Skills Demonstrated

Gameplay testing • Functional testing • Regression testing • Exploratory testing • UI testing • Edge-case testing • Defect identification • Severity/Priority assessment • Reproduction steps • Test execution reporting

Portfolio Note

This is a self-created QA portfolio sample designed to demonstrate manual game testing and defect-reporting skills. It is not client work and does not represent testing performed for a real company.
