WEBSITE QA TESTING

Functional, Usability & Exploratory Testing Sample

Role: Manual QA Tester

Project Type: Personal QA Portfolio Project

Application: E-Commerce Web Application (Sample)

Testing Focus: Functional Testing • UI Testing • Negative Testing • Bug Reporting

This document demonstrates practical manual QA skills through a simulated e-commerce testing scenario. It is a personal portfolio sample and is not client work.

1. Testing Overview

Objective

Validate core e-commerce workflows and identify functional, validation, usability, and UI defects before release.

Scope

In Scope	Out of Scope
Login / Logout	Performance / Load testing
Product search and product details	Security penetration testing
Cart and quantity updates	Backend infrastructure testing
Checkout and required-field validation	Payment gateway certification
Promo code behavior	Production monitoring

Environment

OS	Windows 11
Browser	Google Chrome
Testing Type	Manual / Black-box
Approach	Functional, exploratory, negative, UI/usability

2. Test Case Execution

ID	Test Scenario	Expected Result	Status
TC-001	Login with valid credentials	User is authenticated and reaches account/dashboard.	PASS
TC-002	Login with incorrect password	Clear validation message is displayed; access is denied.	PASS
TC-003	Search for an existing product	Relevant matching products are displayed.	PASS
TC-004	Open product details	Correct name, image, price and product information are shown.	PASS
TC-005	Add product to cart	Selected product appears with correct price and quantity.	PASS
TC-006	Increase cart quantity	Quantity and subtotal update correctly.	PASS
TC-007	Remove product from cart	Product is removed and cart total recalculates.	PASS
TC-008	Checkout with missing address	Checkout is blocked and required-field validation appears.	FAIL
TC-009	Checkout with invalid email	Invalid email format is rejected.	PASS
TC-010	Apply invalid promo code	Invalid code is rejected with a clear message.	FAIL
TC-011	Apply valid promo code	Discount is applied and total is recalculated correctly.	PASS
TC-012	Logout	Session ends and protected pages require authentication.	PASS

Result: 10 Passed • 2 Failed • 12 Executed

3.1 BUG-001 — Checkout allows order submission without a required shipping address

Severity: High **Priority:** High

Steps to Reproduce

1. Log in with a valid account.
2. Add any in-stock product to the cart.
3. Proceed to checkout.
4. Leave the shipping address blank.
5. Click Place Order.

Actual Result: The order is submitted or the checkout process proceeds despite the missing required address.

Expected Result: The system should block submission and display a clear validation message indicating that the shipping address is required.

Environment: Chrome / Windows 11

3.2 BUG-002 — Invalid promo code is accepted without a clear rejection message

Severity: Medium **Priority:** Medium

Steps to Reproduce

1. Add an eligible product to the cart.
2. Proceed to the cart or checkout.
3. Enter an invalid promo code.
4. Click Apply.

Actual Result: The UI does not clearly indicate that the promo code is invalid and may leave the user unsure whether a discount was applied.

Expected Result: The system should reject the invalid code and display a clear, user-friendly validation message.

Environment: Chrome / Windows 11

3.3 BUG-003 — Cart subtotal does not immediately refresh after quantity change

Severity: Medium **Priority:** Low

Steps to Reproduce

1. Add a product to the cart.
2. Change quantity from 1 to 2.
3. Observe the subtotal before refreshing the page.

Actual Result: The displayed subtotal remains unchanged until the page is refreshed.

Expected Result: Subtotal should update immediately after the quantity is changed.

Environment: Chrome / Windows 11

4. QA Test Summary

Metric	Result
Total test cases executed	12
Passed	10
Failed	2
Pass rate	83.3%
High-severity defects	1
Medium-severity defects	2
Critical defects	0

Release Assessment

The core shopping flow is generally functional, but checkout validation and cart calculation behavior should be reviewed before release. High-priority checkout validation should be fixed and retested first, followed by regression testing of the affected checkout and cart workflows.

QA Skills Demonstrated

Manual functional testing • Test case design • Positive/negative testing • Exploratory testing • Defect identification • Severity/Priority assessment • Reproduction steps • Expected vs. actual results • Test execution summary

Portfolio Note

This is a self-created QA portfolio sample designed to demonstrate manual testing and defect-reporting skills. It is not client work and does not represent testing performed for a real company.
